Design a Shiny app using R

Chi-Lin Yu

Do you want to allow people to explore your dataset ? Do you want to share a model you built ? Are you interested in making an interactive application ? By using a `R` package `Shiny`, you will be able to make interactive data visualizations and applications using the `R` language. In this presentation, I will talk about *what* is `Shiny`, *why* and *when* to use Shiny, and *where* to learn Shiny. Also, will give you an intuition of *how* to build a Shiny app.

To run `Shiny` on your R, the `Shiny` package is required.

```r
install.packages("shiny")
```

You can also run some quick examples and play with them beforehand.

```r
library(shiny)
runExample("01_hello")
#runExample("02_text")
```

See you 5/14 ! Hope you can get some feelings about `Shiny` package then !
